

# Medolac Benefit Human Milk

## Benefit 24

Shelf-stable for up to 18 months | Stored at room temperature - NO THAWING | 48 pouches per case

## Human milk-based nutrition similar to preterm milk

### Protein for preterm infants

Donor milk often lacks the protein premature infants need because it is comprised of term infant breast milk. The NICU solution: **Benefit-24 offers twice as much protein as average donor milk.**

	AVG Early Lactation	AVG Donor Milk	Benefit-24
Cal/Oz	18.7	19.2	24.0
Calories	63.4	65	81.1
Protein	1.77	1.05	2.1
Fat	2.9	3.35	4.7
CHO/Lactose	7.55	7.25	8.3

Twice as much protein as average donor milk

Benefit-24 is ultra filtered and standardized to match the same protein and fat as preterm infant mother's own milk.

### Commercial sterility

Medolac Benefit is a commercially sterile product, packaged in a shelf-stable hermetically sealed pouch. Store at room temperature, no thawing required. Keep for 7 days in refrigerator after opening.

### Fortify as needed

While Benefit 24 has high protein, it is not fortified with additional vitamins and minerals. That allows clinical professionals to make the best fortification decision for each baby in their unit.

**Benefit-24** is standardized to **match** preterm breast milk nutrient composition rather than term breast milk in order to support the needs of preterm infants.

**Benefit-24** is a human milk-based infant nutrition product specifically standardized to 24 kcal / oz. Neonatal intensive care units use Benefit-24 when there is a need for higher levels of key nutrients, and may reduce the volume of fortifier required to achieve optimal nutrition targets.
